A B2B DIGITAL PLATFORM WHERE FAIR GOOD TRADE IS MADE EASY, FAST AND TRANSPARENT

Big Idea

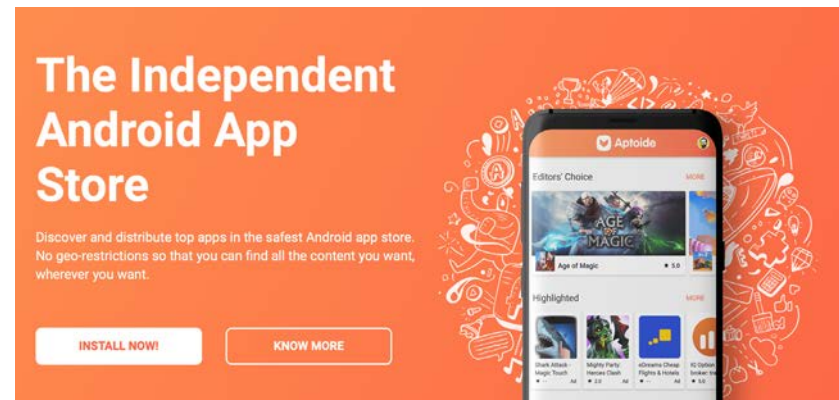

Agri Marketplace is a digital platform for buying and selling agricultural food crops that promotes direct negotiation between farmers and the agro industry. The business model aims to promote fair trade and transparency in the food supply chain by eliminating the costs of traditional intermediation. At the same time, it ensures access to value added services, such as distribution and logistics, offering producers and buyers access to and the ability to negotiate in a truly global market, transposing the barriers of local markets with less cost. Selling and buying agricultural products is made easier through the marketing, sales, logistics and certification tools the platform provides, as well as rigorous market research and a 100% secure payment system. The Agri Marketplace is, thus, the alternative to boosting agricultural business.

HELPS FACILITY MANAGERS WHO WANT TO MANAGE A BUILDING AT PEAK OF EFFICIENCY

Big Idea

Created in 2017, Bandora helps facility managers who want to manage a building at peak of efficiency, by reducing its automation systems complexity and meet optimal comfort, unlike current smart buildings. Leveraging artificial intelligence technologies, in order to handle real time streaming of data from sensors, equipments, IoT devices, weather and occupants, which allows to train a predictive algorithm model and return instructions to reprogram the Building Automation Systems. Bandora's cloud based software will continuously commissioning your building in real time, turning it into an Autonomous Building Operations and Maintenance, allowing to save up to 50% O&M costs. Unlike its competitors, Bandora is hardware agnostic and is designed to complement, not replace, existing investments in Building Automation systems.

DISCOVER THE BEST EVENTS IN YOUR CITY

Big Idea

Fever is an events and experiences technology startup focused on inspiring users and helping event organisers generate greater demand. The Fever mobile app and website reach and inspire over 12 million unique users per week in its key markets (London, New York, Paris and Madrid), allowing them to discover the best events in their city. With its recommendation algorithm, the app features personalised listings for each user, for everything from music festivals and theatre to fashion, restaurants and a host of other events. Based on its users' preferences and behavioral data analysis, Fever is able to reveal and predict untapped demand for events that aren't even available yet. The company has begun using data to create its own events – Fever ORIGINALS, driven by the interest of Fever users. Fever will also use funding to build up its Fever ORIGINALS offering in the cities in which it operates, including Lisbon.

DIGITIZATION AND OPTIMIZATION OF OPERATIONAL PROCESSES IN HOSPITALS

Big Idea

Sparkyway was founded in June 2016 under an entrepreneur program with the purpose of a tourist activities platform development, with 2 part-time partners. The company was on standby mode until 2021, the year in which it is reborn with a new focus, result of the founder's experience in the area of hospital software development for hospital management. In the same year, the Bensaude Group becomes a partner of the company with the objective of developing solutions to overcome the urgent need for the digitalization of health services. The entry into the share capital by the Bensaude Group had as its main objective the development of specific products in the Health area, with the Operating Room – Sparksys OR, being the first product to be developed. By the end of 2021, the company gathered a team of 4 people, essentially software engineers, all of them with experience in the hospital field, having culminated all development in the first installation of the product by the end of 2022, namely at Hospital Garcia da Horta (Almada).

BUILDING SMART DISPLAY NETWORKS

Big Idea

Wall-i is a programmatic outdoor advertising network, that displays ads in screens for segmented audiences, by age, gender, location and market, in places such as retail stores, supermarkets, hotels, insurance and banking branches and agents, stimulating the immediate purchase of a specific product or service by that specific audience. Wall-i aims to be the Google Ads of the outdoor advertising. By combining plug-and-play screen incorporation and audience recognition technology (age, gender and mood), with a CPV /CPM business model, it enables real-estate owners to monetize LCD screens and tablets with ads.

THE DIGITAL WALLET FOR ID ASSETS

Big Idea

WalliD is a cutting-edge digital identity solution that addresses the challenges of the fragmented and insecure digital ID landscape. With a comprehensive suite of SDKs and low-code tools, WalliD enables developers to easily and securely access multiple verifiable data sources, such as blockchains, PKIs, and DIDs. This empowers them to authenticate and verify users' data within their systems. WalliD also caters to users, providing a self-sovereign wallet that allows authentication on both web2 and web3 platforms while ensuring control over assets and data. What sets WalliD apart is its unique approach. Rather than reinventing the wheel, WalliD aggregates existing infrastructure, making it interoperable and safe. It goes beyond typical onboarding product suites by offering digital ID verification and being fully open-sourced. Operating on the frontend, WalliD prioritizes privacy, putting users' data security first. With a team experienced in digital ID and smart contracts.

SMARTER IN-STORE SHOPPING EXPERIENCE

Big Idea

A mobile shopping and checkout solution aimed at providing a smarter personalized instore shopping journey for shoppers and offering retailers a new way to personalize and improve their customers' shopping experience. It provides shoppers with a smart in-store shopping experience through a convenient and personalized journey, with a fast checkout (Beep & Go). YouBeep offers retailers a mobile shopping & checkout solution, via a plug and play Connector, at a fraction of the cost and time compared to current solutions. Its patented plug & play shopping and checkout solution has been tested across markets and retailers, reducing checkout times and maximizing basket values.

THE TOILET PERFORMS URINALYSIS AND CONVEYS RESULTS IN SIMPLE WAY

Big Idea

Ablute is a urinalysis device integrated in a toilet. The toilet is exclusive and wash itself, completely, with almost no water and no detergents, after each use. Medical analyzes are instantly transmitted to the user in a simple language and completely to the doctor. The mission aims to provide exams free of charge and the recognition that the information obtained in each analysis serves, in addition to its clinical importance, the interest of daily use for non-medical information. The company develops the sanitary hardware, as well as the medical device. It includes the software that transmits the analyzes to the user and doctor, as well as a revolutionary Lab-On-a-Chip, with resilient characteristics, designed for continuous reuse, without discards or consumables. Frequent monitoring is essential for early diagnosis, as well as disease surveillance and control. The exams carried out in the Ablute toilet do not cause trauma or pain to the patient and can be done with high frequency.

WASTE LESS, LIVE BETTER

Big Idea

Aqua More is an automation developed by Aroundinspire, Lda. located in Taguspark, in Oeiras – Portugal. This Water Saving Solution contributes to the water efficiency of buildings in both residential and professional areas and services, acting directly on waste in hot water taps and optimizing infrastructures for the distribution of hot water. Aqua More also aims to change the drinking water paradigm through information on consumption, savings and the Nexus Water/Energy. With this system, when opening a tap for the bath, the water will only come out when it is hot.

ENVIRONMENTALLY FRIENDLY SOLAR PANEL CLEANERS

Big Idea

ChemiTek is a Portuguese company specialized in the development, production, and distribution of efficient and environmentally friendly chemical products for industrial maintenance. With a diverse portfolio, we offer innovative solutions for various sectors, including the solar and glass industries. Our proprietary formulas, specifically developed for the solar industry, make us a reference in the field. We specialize in innovative and biodegradable contaminant removal agents and coatings for dirt mitigation and efficiency improvement. At ChemiTek, they are dedicated to shaping a future where biodegradability and environmental respect are fundamental principles in the development of chemical products. With a strong commitment to sustainability and technological advancement, we aim to optimize solar energy production, reduce operating and maintenance costs of solar installations, and promote the optimized use of water in solar cleaning processes.

ECO FRIENDLY TILES FROM WASTE TO WALL

Big Idea

Based in Porto, Portugal, since 2018, with roots set in architectural practices, the team joins forces with material development labs and design schools, to implement the circular economy in design thinking, all the way from concept to the final product, adding value to waste management industry. Flowco is excited to announce GOMA XL, the first colorful and flexible sports floor made from the recycling of footwear. With the technical guarantee of impact absorption and thermal and acoustic improvement. With an annual consumption of 20 billion pairs of shoes, only 5% are recycled. By incorporating this waste in the production of GOMA, we contribute to increasing the value chain and implementing a circular economy. GOMA is an ecological product that favors the visual sense, as well as touch and smell. To break with the barriers of creativity, the gum adapts to curved surfaces, both concave and convex. With hand-selected waste by type and color, enhances a highly customizable service, placing the product on the high-end design market.

BRINGS THE TASTE OF THE BEST COFFEE AND THE BEST CUSTOMER SERVICE

Big Idea

NewCoffee S. A. is the 4th largest operator in the coffee market in Portugal, specialized in the development, production and marketing of coffee blends. Founded in 2007, the company consolidated its position through a strategy of acquiring small and medium-sized companies: Sanzala in 2007, Caffècel in 2008, exclusive marketing rights for the Lavazza brand for the HoReCa channel in 2008, Bogani and A Caféeira in 2009 and Novo Dia in 2016. With a 360° offer, it manages a portfolio of 6 brands with different positioning and value propositions and is present in the Horeca, Office and Retail channels, also having its own coffee outlet, Sanzala Coffee Roasters and an online store, bogani.pt. Present throughout the national territory, NewCoffee also has exports to 22 other countries, USA, Germany and France being its most important markets.

THE SMARTEST WAY TO GROW YOUR OWN FOOD

Big Idea

Noocity wants to make Urban Farming accessible to everyone. The product the company has developed enables anyone living in an urban environment to grow and harvest their own vegetables in a practical, efficient and eco-friendly way. Designed and manufactured in Portugal, Noocity already has a strong international presence, with over 4,000 m2 of vegetable patches installed worldwide. In 2018, Noocity entered the French market and in less than a year nearly 50% of its growbeds sold were shipped to the country.

REVOLUTIONIZE THE HEALTHY SNACK INDUSTRY

Big Idea

Oh!My Snacks addresses the challenges faced by people in finding and consuming healthy snacks. Their solution lies in a personalization platform, driven by algorithms, that curates a unique mix of nutritious, tasty snacks based on each customer's preferences, identified through an engaging quiz and customer feedback. They're not just enhancing the snacking experience, but also facilitating individual health and wellness journeys. By turning snack time into an exciting adventure of discovery and enjoyment, we're redefining snack culture and promoting healthier lifestyles.

ENERGY STORAGE SOLUTIONS

Big Idea

The increased participation of renewable energy sources in the energy matrix, implies the development of innovative energy storage solutions to guarantee the integration of these intermittent energy sources in the energy distribution systems, it is for this reason, that energy storage is the key to the energy transition. Based on this scenario, they are developing an innovative solution, which will make it possible to take advantage of the available infrastructure at more than 33,000 vehicular natural gas filling stations in 90 countries, to store surplus renewable energy production, and to generate of electricity in a decentralized manner.

ADVANCED TECHNIQUES OF SIGNAL EMISSION

Big Idea

In recent times, there have been several reports of Unmanned Aerial Vehicles (UAVs) incidents involving aircraft in the airports or airfields. With the mobile system for immobilizing and diverting unauthorized UAVs, it is possible to protect the intrusion of unauthorized UAVs (commercial and custom-made), ground, air and water vehicles in restricted areas, e.g. airports, military areas, condominiums and occasional situations of public events or areas where it is necessary to ensure public safety. Since it is a mobile system, it can be easily and quickly adapted to the areas to be protected. This system minimizes interference with other systems and, on the other hand, implements advanced techniques of signal emission with high energy efficiency, minimizing the environmental footprint. The modular system was designed based on its ease of transport and handling by defense forces (military and public security).

ONE WIND TURBINE IN EVERY ROOFTOP

Big Idea

Windcredible is focused on the development and production of Vertical Axis Wind Turbines, a renewable energy technology that generates electricity from wind. Their patented design has several key advantages over traditional wind turbines, including their ability to generate electricity efficiently, they are compatibility with urban environments, and they are suitability for integration into smart grids. One key advantage is being a source of distributed energy, with low operating costs and minimal maintenance requirements. This makes them a cost-effective option for customers, especially when compared to traditional fossil fuel-based energy sources.

FOR A SAFER TOMORROW

Big Idea

Immunethp has developed an anti-bacterial immunotherapy based on the discovery of a virulence mechanism shared by a set of different pathogenic bacteria. It discovered that a single molecule (extracellular protein), which is excreted by the pathogenic bacteria, is able to completely shut down the host immune system, letting the bacteria thrive and causing severe infections. Thus, by neutralising this molecule it can induce protection. By addressing an extracellular virulence factor that is highly conserved in the different bacteria, the company's anti-bacterial immunotherapy elicits protective antibodies against all the serotypes of the referred bacterial pathogens. It will, thus, also prevent the emergence of strains which are not addressed by current vaccines and which only address structural epitopes.

HELPING DOCTORS BETTER TARGET THE CANCER, PROTECTING PATIENTS FROM UNNECESSARY RADIATION

Big Idea

NU-RISE is driving the next-generation of radiotherapy by empowering doctors “to see while treating”. NU-RISE provides real-time patient dose tracking for adaptive radiotherapy helping doctors to deliver safer and accurate radiation therapy in less treatment sessions. By monitoring in real-time the level of radiation being delivered near the tumor and surrounding organs at risk and combining this valuable data with NU-RISE’s adaptive software, it’s possible to perform treatment adjustments every time a deviation occurs. Doctors can better target the cancer while protecting patients from unnecessary radiation and avoiding severe secondary effects. It’s an evolution for cancer treatment—faster, personalized, and safer cancer treatments.

MAKING THE WORLD HEALTHIER BY IMPROVING THE RELATIONSHIP PEOPLE HAVE WITH NUTRITION

Big Idea

Nutrium is a company with the mission of making the world healthier by improving the relationship people have with nutrition, and to this end has developed two highly complementary business models: a SaaS for Nutritionists and a wellness service for companies. The first vertical, Nutrium SaaS, is a tool that Nutritionists use to holistically manage their work, their patients, and their relationship with those patients. The second vertical, Nutrium Care, is the application of this network of nutritionists to promote wellness in companies, helping their employees stay healthier and improve their mental and physical performance.

AI-BASED PLANNING AND SIMULATION FOR ORTHOPEDIC SURGERY

Big Idea

Implant Manufacturers' inventory consigned to each hospital is a major problem, generating huge costs annually. A lot of the inventory is excessive, much of the items will become obsolete before use, costing them an average of +\$300M every year, and corresponding to a significant environmental impact as mostly composed of polyethylene. PeekMed® is an AI-based planning and simulation system for orthopedic surgery, that allows surgeons to automatically plan the procedure using the patient's X-ray or CT scans, without the need of an engineer, and therefore better treat their patients, improving outcomes, while helping with inventory management. PeekMed is MDR certified and FDA cleared.

THE GLOBAL LEADER IN CARBON MONOXIDE THERAPEUTIC

Big Idea

Proterris is a clinical development stage company focused on therapeutic applications of low-dose carbon monoxide. Leveraging carbon monoxide's (CO) demonstrated anti-fibrotic, anti-inflammatory and cytoprotective properties, Proterris initially focused on developing CO therapies for delayed graft function (DGF) in renal transplant recipients and idiopathic pulmonary fibrosis (IPF). Other indications (pulmonary arterial hypertension and acute respiratory distress syndrome) are also being developed by the National Institute of Health (NIH). In short, CO has enormous potential to significantly impact the lives of millions of patients suffering from a wide range of acute and chronic diseases.

R-nuucell a new era for treating cancer

Product

'Ru-Drug' - efficient against Triple Negative Breast Cancer, the most metastatic breast cancer (28% survival rate in 5 years)

Encapsulated for better accumulation in the tumour

Proof of Concept

- Antimetastatic
- Reduction of ~30% lung metastases after 6 treatments!

AN EFFICIENT DRUG TO SOLVE THE PROBLEM OF METASTASES ASSOCIATED TO AGGRESSIVE CANCERS, THE MAIN CAUSE OF CANCER DEATH

Big Idea

R-nuucell is a spin-off of Faculdade de Ciências, Universidade de Lisboa. Its mission is to develop innovative chemotherapeutics to address unmet clinical needs, namely, to treat metastatic cancers. Its lead drug, 'Ru-Drug', with a granted international patent, envisages the treatment of the Triple Negative Breast Cancer (TNBC) the most aggressive of all breast cancers, without cure, with a survival rate of 28% in 5 years. Its most recent in vivo studies in mice with TNBC, envisaging to consolidate the proof of concept, show that 6 treatments with our nontoxic innovative drug already cause the reduction of lung metastases in ~30%.

THE ONLY CONTINUOUS MONITORING DEVICE FOR URINARY INFECTIONS

Big Idea

TIMEUP, Lda is a spin-off of the University of Coimbra (UC) and the Polytechnic Institute of Coimbra, created in 2023 by 5 researchers in the areas of microbiology and biomaterials, who since 2018 have been developing an innovative diagnostic device, capable of monitoring the urine of catheterized patients for several weeks. At the moment the company already has a functional prototype tested in the laboratory to detect the bacteria responsible for more than 80% of urinary infections and in 2024 the prototype will be optimized to monitor more pathogens. Later this year, the UC will submit the patent for the technology, and a licensing agreement with TIMEUP, Lda is already being prepared for its commercial exploitation.

MOBILE APP TO AGGREGATE WINE PURCHASES FOR TOURISTS

Big Idea

Yon Wine aims to be a complement to the Wine Tourism experience, solving two aspects of the same problem, for the tourist and the producer. How? The Yon Wine app offers each visitor (mostly foreigners), a convenient and transparent solution for purchasing the wines experienced during their visit, overcoming the typical fears and bureaucracy of shipping to their country of origin in addition to presenting a transparent final value for users. At the same time it simplifies all front and back-office work for the producer allowing them more time to focus on the customer, helping to reduce the number of lost sales and increase revenue, prolonging the customer lifetime value.
